ABSTRACT

A halter bib athletic garment is described herein. A halter bib athletic garment may be removed or lowered without removing a jersey by simply pulling a halter strap over the head of a wearer. One or more embodiments of a halter bib allow wearers to more readily urinate or have a bowel movement because the halter bib may be easily lowered or removed. A halter bib athletic garment may include a lower body section, a chamois coupled to the lower body section, and an upper body section. The upper body section comprises a halter strap forming a portion of a loop of a head opening on the upper body section. The halter strap includes two front side portions and a rear side portion positioned between the front side portions. The rear side portion is coupled to the athletic garment only with the front side portions of the halter strap.
